<u>BeWear Beacon Version 2:</u>
Eliminates the need for a receiver, and uses four ultrasonic sensors to trigger LED strips

Beacon Features:
- 15 ft range
- 4 ultrasonic sensors
- When any of the 4 ultrasonic sensors are tripped the LED strip will illuminate

Issues:
- Cannot control what triggers the sensors
  - If any object falls in front any of the sensors the LED strip will trigger
    Ex: A leaf could trip the sensors causing the LED strip to illuminate for no reason
